Hospitals Dataset

Data for 113 U.S. hospitals.
The response variable is:
      LenStay   average length of stay for a patient (in days)

The possible predictor variables are:
      Age   average patient age (in years)
      InfRisk   percent chance of acquiring an infection while in the hospital (in percent)
      Culture   number of cultures performed per 100 patients without signs of hospital acquired infection
      XRay   number of x-rays performed per 100 patients without signs of pneumonia
      School   Is the hospital associated with a medical school (yes or no)
      Region   region of the country (North East, North Central, South, West)
      Beds   number of beds at the hospital
      Census   average daily number of patients at the hospital
      Nurses   average number of nurses at the hospital
      Services   percentage of a list of medical services that are provided at the hospital (in percent)
